## Number Pyramid Builders on a Quest - The secret of the Top Stones

**Build number walls, fill in missing stones, and discover hidden patterns:**

In research tasks, the children *experiment*, swap numbers, *compare* results, and *explain* their thinking processes while *solving problems*.

A project that makes mathematics exciting, playful, and creatively engaging!

*Strategies* are developed to build number walls quickly and skillfully. Along the way, understanding of number relationships and arithmetic operations *naturally grows*.

Children see themselves as real *researchers* who *discover connections* on their own and are able to *communicate* and *justify* their ideas.

Become a  
number  
wall builder  
too...

... and let yourself be inspired: build, tinker, explore, and experience how mathematics becomes tangible, understandable, and fascinating through your own discoveries.
