Project Earth

Empowering young people to build a better world.

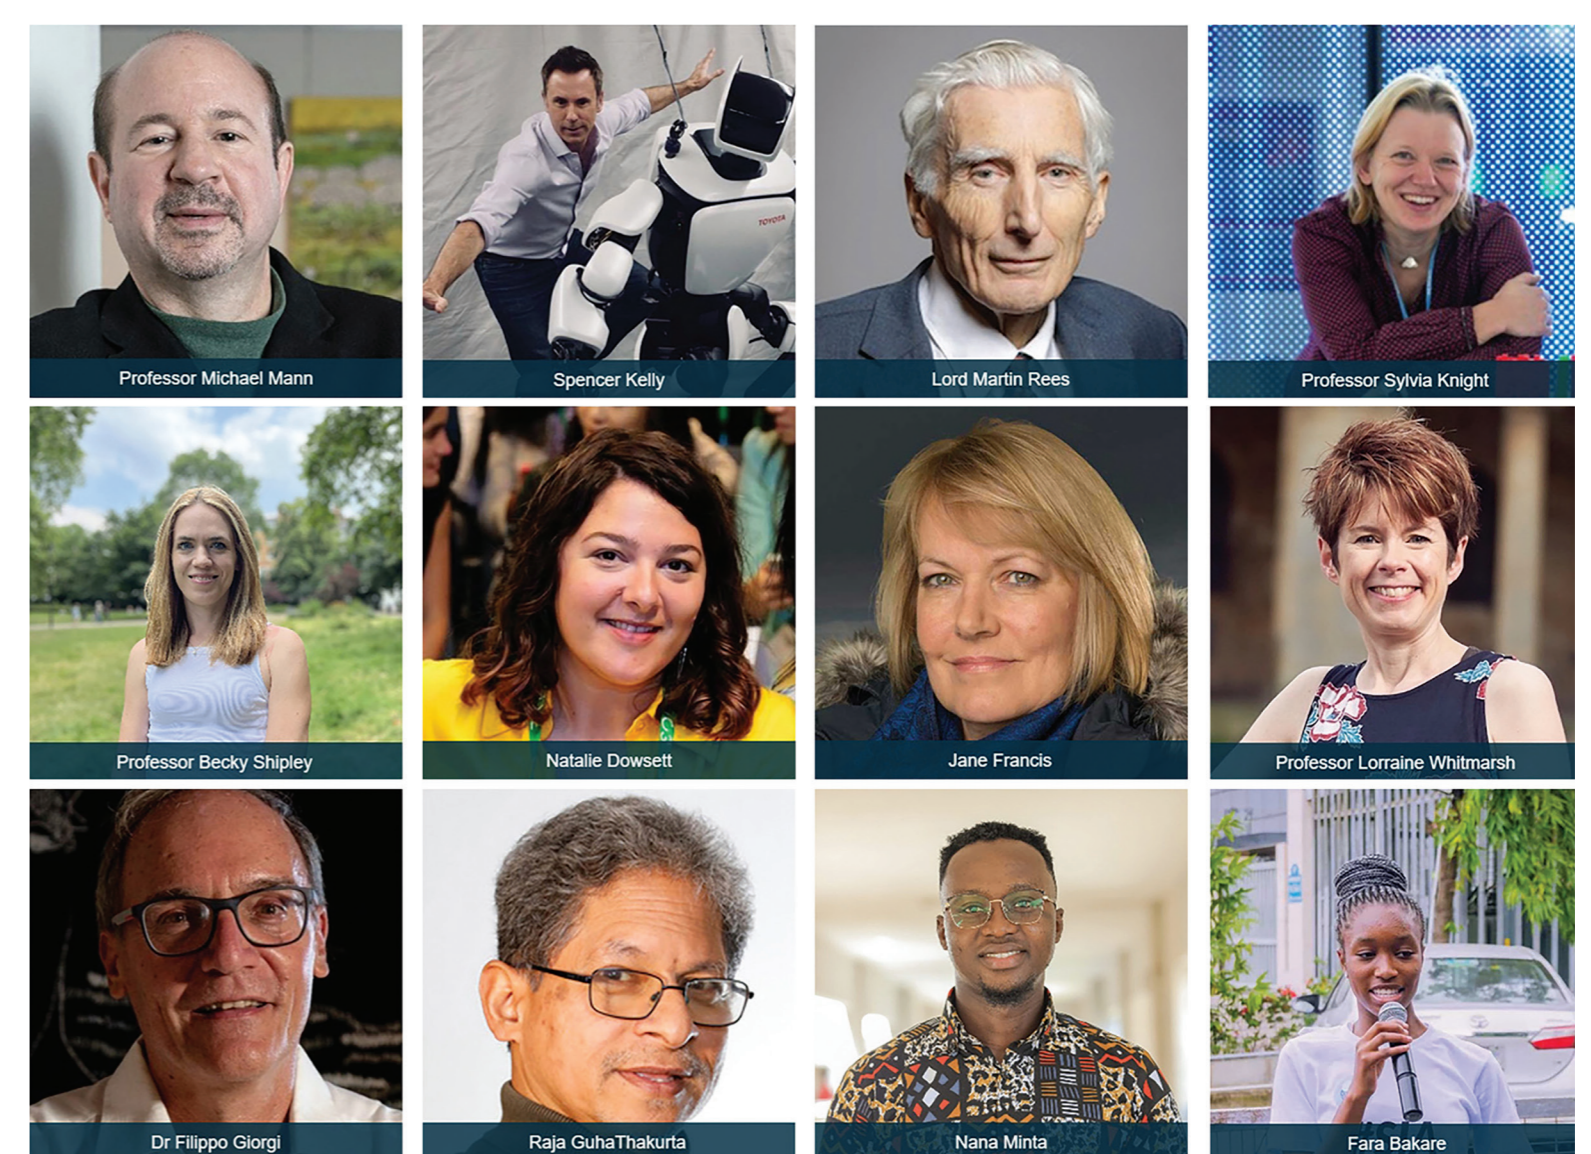

Project Earth is a global youth innovation programme that gives young people real agency, real support and a real platform to change the world - all backed by over 120 expert advisors and a bespoke AI mentor named Scout.

When trusted, challenged, and supported, young people generate ideas that are bold, practical, and transformative.

Their journey culminates in an extraordinary moment - **Pitch for the Planet** where selected teams will pitch their ideas on a world-class stage at the Royal Institution, London on 26 June 2026.

Project Earth students are developing remarkable solutions, including:

- a device to extract methane from barns, reducing agricultural emissions.
- a low-cost air quality monitor for schools and communities.
- a smart compost probe to optimise composting and reduce waste.

Manuela - Spain

Maja - Sweden

Alexa - Rwanda

Project Earth doesn't just teach about climate change. It builds hope, competence, and agency. It shows young people that their ideas are valuable, their actions can create change, the world needs their brilliance - now.
